Jeavio

LEGACY
RE-PLATFORMING

Legacy systems can hold back scale, performance and innovation.

Introduction

Legacy systems can hold back scale, performance, and innovation. Jeavio's Legacy Re-platforming service offers a pragmatic modernization path to migrate legacy application to scalable, and secure cloud-native architectures
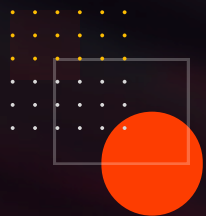

Scope

This service is focused on infrastructure modernization, dependency mapping, API abstraction, containerization, and third-party integration updates. We help migrate your application to the cloud and implement best practices in monitoring, security and compliance. Our CloudOps managed service offering is also available to provide on-going management of your applications.

Methodology

Jeavio applies a phased, lightweight approach.

1 Discover Strategic Opportunities

- Evaluate current architecture, databases, and integrations
- Identify blockers for portability or scalability
- Determine cloud-readiness of core services

2 Migration Planning

- Select appropriate cloud architecture
- Design Re-platforming strategy
- Implement security best practices

3 Execution Support

- Provide hands-on architecture guidance and technical support
- Deliver proofs-of-concept where needed
- Support change management and DevOps integration

Deliverables

Re-platforming plan including integration, deployment architecture, and detailed cloud migration blueprint

Execution support documentation

Post-migration QA and performance tuning

Why Jeavio?

We understand that modernization doesn't mean starting over. Jeavio's team brings deep modernization experience to make legacy platforms scalable and future-ready—without throwing away the past.

Jeavio

Unconstrained.

At Jeavio, we are unconstrained—by convention, by limitation, and by the status quo. We believe innovation thrives when boundaries are removed. Our approach is rooted in flexibility, bold thinking, and a refusal to accept "that's how it's always been done" as an answer. Whether we're building cutting-edge technology, designing next-generation experiences, or solving complex challenges, we operate with the freedom to explore, disrupt, and reimagine. Unconstrained isn't just a mindset—it's our philosophy.

Fluid.

We are fluid—adaptive, dynamic, and always in motion. In a world that never stands still, we embrace change as a constant and evolve with purpose. Our processes, mindset, and solutions are designed to flow seamlessly with the needs of our clients, the shifts in the market, and the pulse of innovation. Being fluid means we don't just react—we anticipate, adjust, and move forward with agility and intention. It's how we stay ahead, stay relevant, and stay true to who we are.

Human.

We are human—at our core, in our values, and in everything we create. In a world driven by technology and rapid change, we never lose sight of what matters most: people. We design with empathy, collaborate with authenticity, and build solutions that serve real human needs. Our approach is grounded in understanding, shaped by diversity, and fueled by a deep sense of purpose. Being human means we lead with heart, think with compassion, and put people first—always.
